

BENEMÉRITA UNIVERSIDAD AUTÓNOMA DE PUEBLA

FACULTAD DE CIENCIAS QUÍMICAS
LABORATORIO DE FISICOQUÍMICA TEÓRICA

Reporte de resultados para el programa
alignandcomparemolecules

Título del proyecto:

**Desarrollo de software para comparar y resolver estructuras
isoméricas mediante el tensor de inercia**

PRESENTA
Luis Alfredo Nuñez Meneses

DIRECTOR DE TESIS

Dr. Juan Manuel Solano Altamirano
FQ-BUAP

15 de marzo de 2019

1. Resultados

1.1. Pruebas realizadas

Las Pruebas que ya se realizaron son las siguientes y los resultados son óptimos y satisfactorios en todas las pruebas.

Realicé todas las pruebas que muestro a continuación, para hacer todas las comparaciones programé unos scripts que me ayudaran a automatizar todo el trabajo.

Rendimeinto del programa

Tiempo más corto de cálculo = 0.001 s

Tiempo más largo de cálculo = 0.043 s

Tiempo total de todos los cálculos = 2.423 s

Número de comparaciones = 663

Promedio de tiempo = 0.0036546 s

G_09_Ni

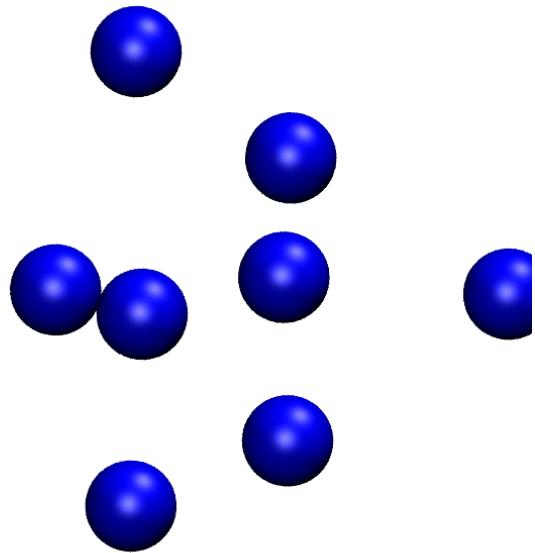

A cluster of 10 blue spheres arranged in three main horizontal rows. The top row has one sphere. The middle row has two spheres. The bottom row has five spheres, with the first two forming a small group, the next two forming another small group, and the last one being separate.

2. Extras

Durante la realización de este reporte me surgió la necesidad de crear un par de scripts que puedan ayudar para el trabajo y el empleo de esté programa. La tarea del script *script-Make_All_Comparations.bsh* es realizar todas las comparaciones posibles en una carpeta que contenga varias geometrías en el formato de archivo XYZ, guardando el resultado en otro archivo.

El otro script es *translate_comparatation2Latex.bsh* que utiliza la salida del anterior script para crear un resumen de las comparaciones y traducirlas a un formato personalizado de latex y, de esta manera, poder visualizar con mayor facilidad las comparaciones.

Actualmente el script sigue en desarrollo y se encuentra en el repositorio del programa.
